

REMARKS

Claims 32-56 remain in the application and claims 32, 38, 44, 48, and 53 have been amended hereby.

The specification has been amended hereby to insert the correct continuity data for this application.

Reconsideration is respectfully requested of the rejection of claims 32-56 under 35 USC 103(a), as being unpatentable over Wash '096 in view of European Patent Application 0 428 072 A2 ('072 reference).

It is respectfully submitted that the combination of Wash '096 in view of the '072 reference fails to show or suggest an output circuit for outputting picture data to a printer device and for correcting the picture data using deviation data from a memory to display information data, a size or aspect ratio of prints, a number of prints, and a size of paper on the corrected picture data.

Wash '096 is a system for information exchange between various users of the film and is silent about an output circuit for outputting picture data to a printer device and for correcting the picture data using deviation data from a memory to display information data, a size or aspect ratio of prints, a number of prints, and a size of paper on the corrected picture data.

Further, because there are no features in the '072 reference that somehow could be combined with Wash '096 and result in the presently claimed invention, it is respectfully submitted that amended independent claims 32, 38, 44, 48, and 53, and the claims

7217/42914F-G
depending therefrom, are patentably distinct over Wash '096 in
view of the '072 reference.

The prior art made of record and not relied upon has been
reviewed and is not seen to show or suggest the present invention
as recited in the amended claims.

Favorable reconsideration is earnestly solicited.

Respectfully submitted,

COOPER & DUNHAM LLP

Jay H. Maioli
